What is Construction Management
Construction managers work with architects and engineers to make a client’s vision a reality. We create and execute the overall plan for a project from inception to completion. We provide creative solutions to the complex problems inherent to state-of-the-art structures, while simultaneously managing project, cost, schedule, logistics, quality and safety.

Graduates from CSU consistently move on to exciting professional careers managing a vast array of construction projects. By integrating engineering, business, and construction practices, our program offers the tools, experience and perspective needed to be successful in this dynamic field.

Going Beyond the Degree
Student Organizations are a great way to get involved! A dozen clubs exist within the Department of Construction Management to promote professionalism and provide a common forum for the exchange of information and current developments within the industry.

Competition Teams compete nationally with other universities, offering students the opportunity to apply skills learned in the classroom to real world construction management scenarios.

The CM Cares program partners CM students with industry mentors to complete need-based construction related projects in our community while developing well-rounded, self-motivated individuals with a passion for service.

Internship and Job Placement Assistance
In addition to the campus Career Center, the CM Phelps Placement Office provides individualized career services. CM continues to boast one of the highest placement rates and entry level salaries of all majors.

Follow the hyperlinked headings for more information.

Sampling of Entry Level Career Opportunities
- Field Engineer
- Project Engineer
- Safety Engineer
- Quality Control Engineer
- Business Developer
- Project Scheduler
- Assistant Estimator
- Assistant Project Manager
- Assistant Superintendent
- Sustainability Consultant

Recruiting Industries
- Commercial
